## EuroSense 2014: A Sense of Life

6th European Conference on Sensory and Consumer Research

7-10 September 2014 | Bella Center, Copenhagen, Denmark

# My Goal for this Presentation

I want to make you curious about temporal sensory methods and what they do and don't deliver. Especially **Temporal Check-All-That-Apply**, the method that I'm about to present.

I want you to become interested in its potential, to want to play with it, and to get real benefit from it.

I also want you to learn from it, criticize it, tweak it, and to try to improve it. Then I want for you, and I, to take what we've learned and to create new methods that surpass it, so that we can throw it away, and start again with something even better.

How do flavours  
evolve in this product

How do flavours  
evolve in this product

## Flavor Profile method

(cf. Caul, 1957)

Order of elicitation of flavour characteristics is one aspect of the characterization of complex food... especially important is the early development of appropriate sensations.

## Flavor Profile method

(cf. Caul, 1957)

Order of elicitation of flavour characteristics is one aspect of the characterization of complex food... especially important is the early development of appropriate sensations.

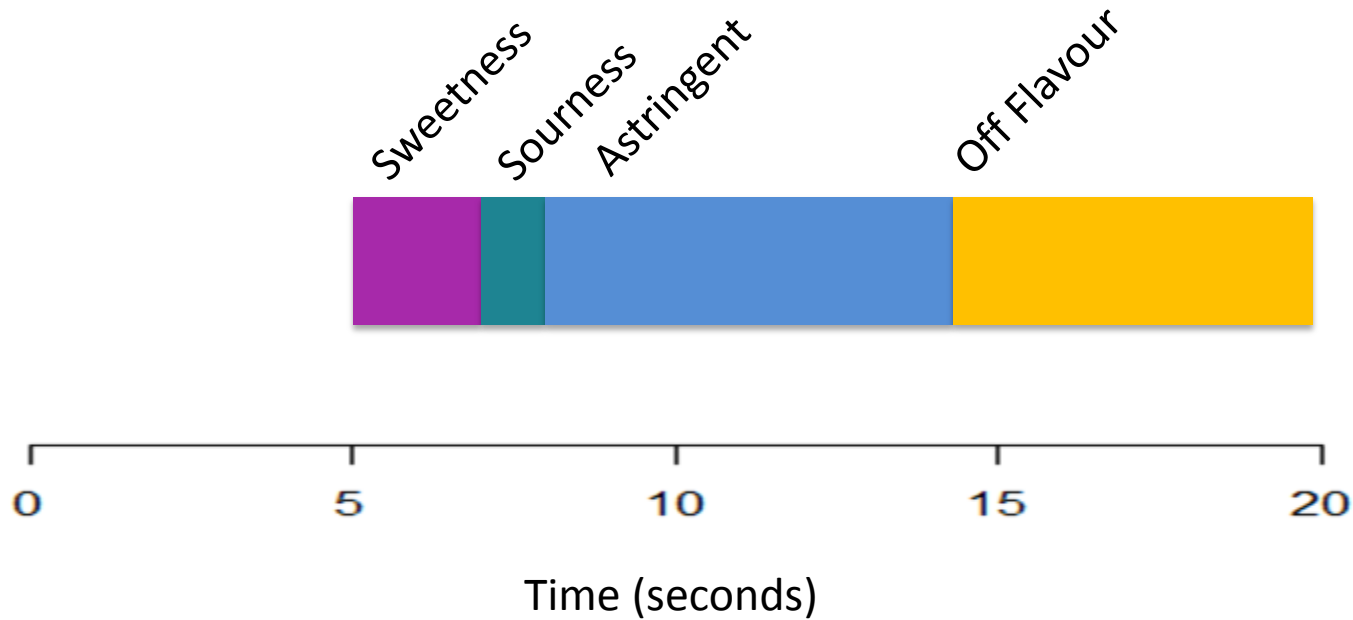

## Temporal Dominance of Sensations (TDS)

(Pineau et al., 2009)

“...the new sensation popping up at a given time...”

# TDS

Data provides a **sequence of dominant sensations** over time.

# Check-All-That-Apply (CATA)

From the following list, check the **words** that **describe** the **orange juice** that you just tasted (check ***all*** that apply).

☐ Astringent

☐ Off flavour

☐ Sourness

☐ Bitterness

☐ Sweetness

☐ Orange flavour

# Temporal Check-All-That-Applly (TCATA)

- Extends CATA to **continuously track sensory properties.**
- Builds on earlier methods  
(Flavor Profile, TDS, ...)
- Could be used by trained assessors or consumers.

# Temporal CATA

**Check and uncheck words** to track changes in the orange juice. At each moment, the words that are **checked** should **describe** the **orange juice** (check *all* that apply, in that moment).

## **Flavor Profile method**

(cf. Caul, 1957)

Order of elicitation of flavour characteristics is one aspect of the characterization of complex food... especially important is the early development of appropriate sensations.

## **Taste Quality Tracking**

(Zwillingner & Halpern, 1991)

TQT is highly similar to TDS. The authors find evidence of assessors processing sensations in parallel, suggesting a limitation with TQT.

## **Temporal Dominance of Sensations (TDS)**

(Pineau et al., 2009)

“...the new sensation popping up at a given time...”

## Flavor Profile method

(cf. Caul, 1957)

Order of elicitation of flavour characteristics is one aspect of the characterization of complex food... especially important is the early development of appropriate sensations.

## Taste Quality Tracking

(Zwillingner & Halpern, 1991)

TQT is highly similar to TDS. The authors find evidence of assessors processing sensations in parallel, suggesting a limitation with TQT.

## Temporal Dominance of Sensations (TDS)

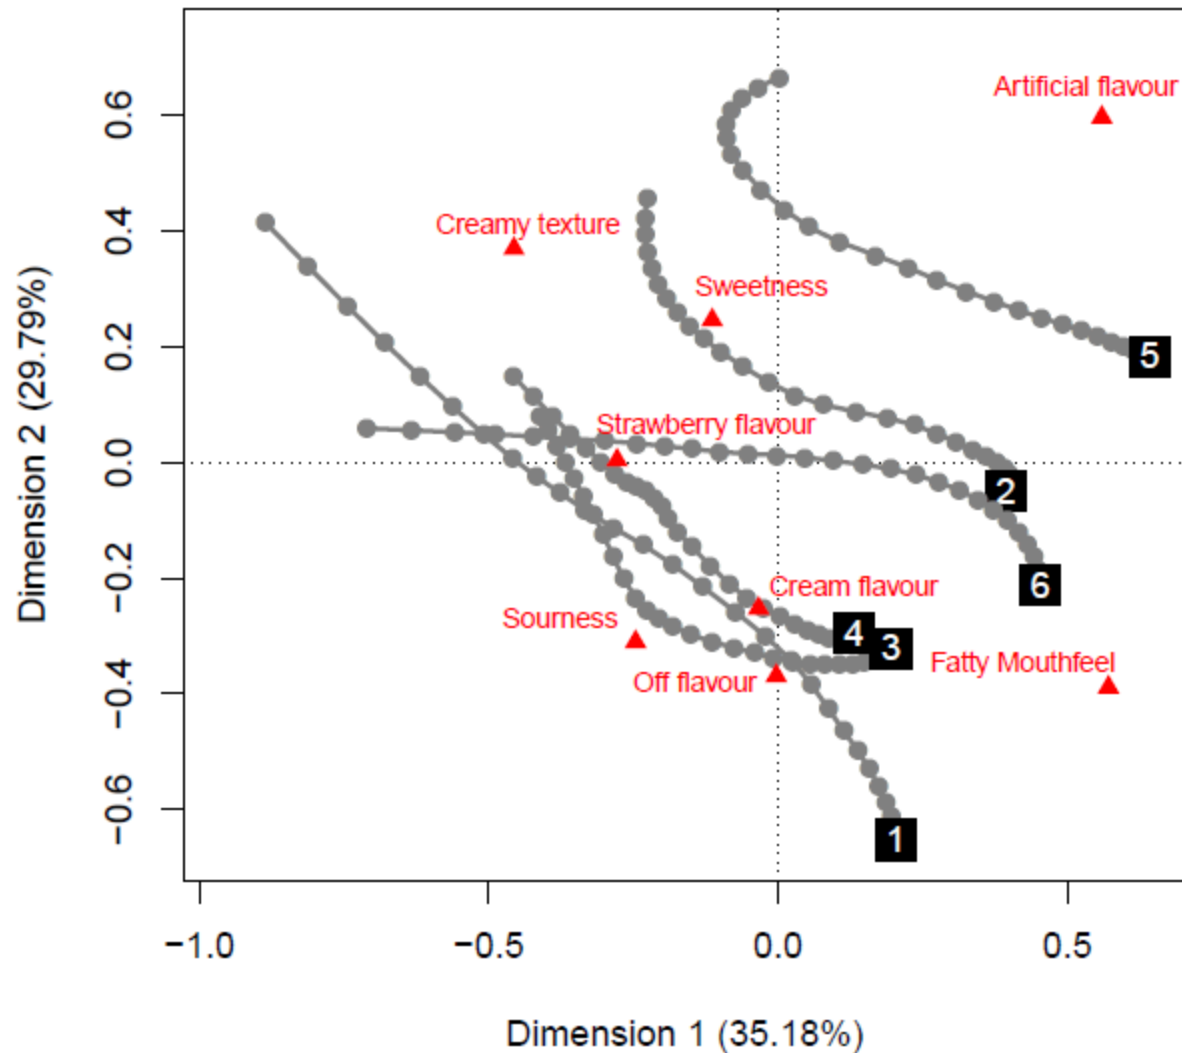

(Pineau et al., 2009)

"...the new sensation popping up at a given time..."

	TDS	TCATA
<b>Respondent's task</b>	Indicate the dominant attribute at each moment	Describe the sample at each moment
<b>Underlying model for processing sensations</b>	Sequential, slow	Sequential Parallel
<b>Data</b>	Multinomial (often treated as binomial for simplicity)	Binomial (straightforward statistics)

# Orange Juice Study

(March 2014)

TDS consumers

TCATA consumers

Each panel evaluated the same 6 orange juices

**Key findings:**

**TDS – TCATA**

# **1. TCATA and TDS orange juice profiles are similar for several juices.**

**This tells us that both methods are capturing “signal” (not just noise).**

# Results for Orange Juice 4

## TDS

## TCATA

## 2. TDS shows a “kingmaker effect”.

We gain information about one attribute, at the expense of other attributes.

## TDS Results for Orange Juice 2

## TDS Results for Orange Juice 2

TCATA allows multiple attribute selection so there is no “**kingmaker effect**”.

It gains information about secondary attributes at the expense of the primary attribute.

# TCATA Results for Orange Juice 2

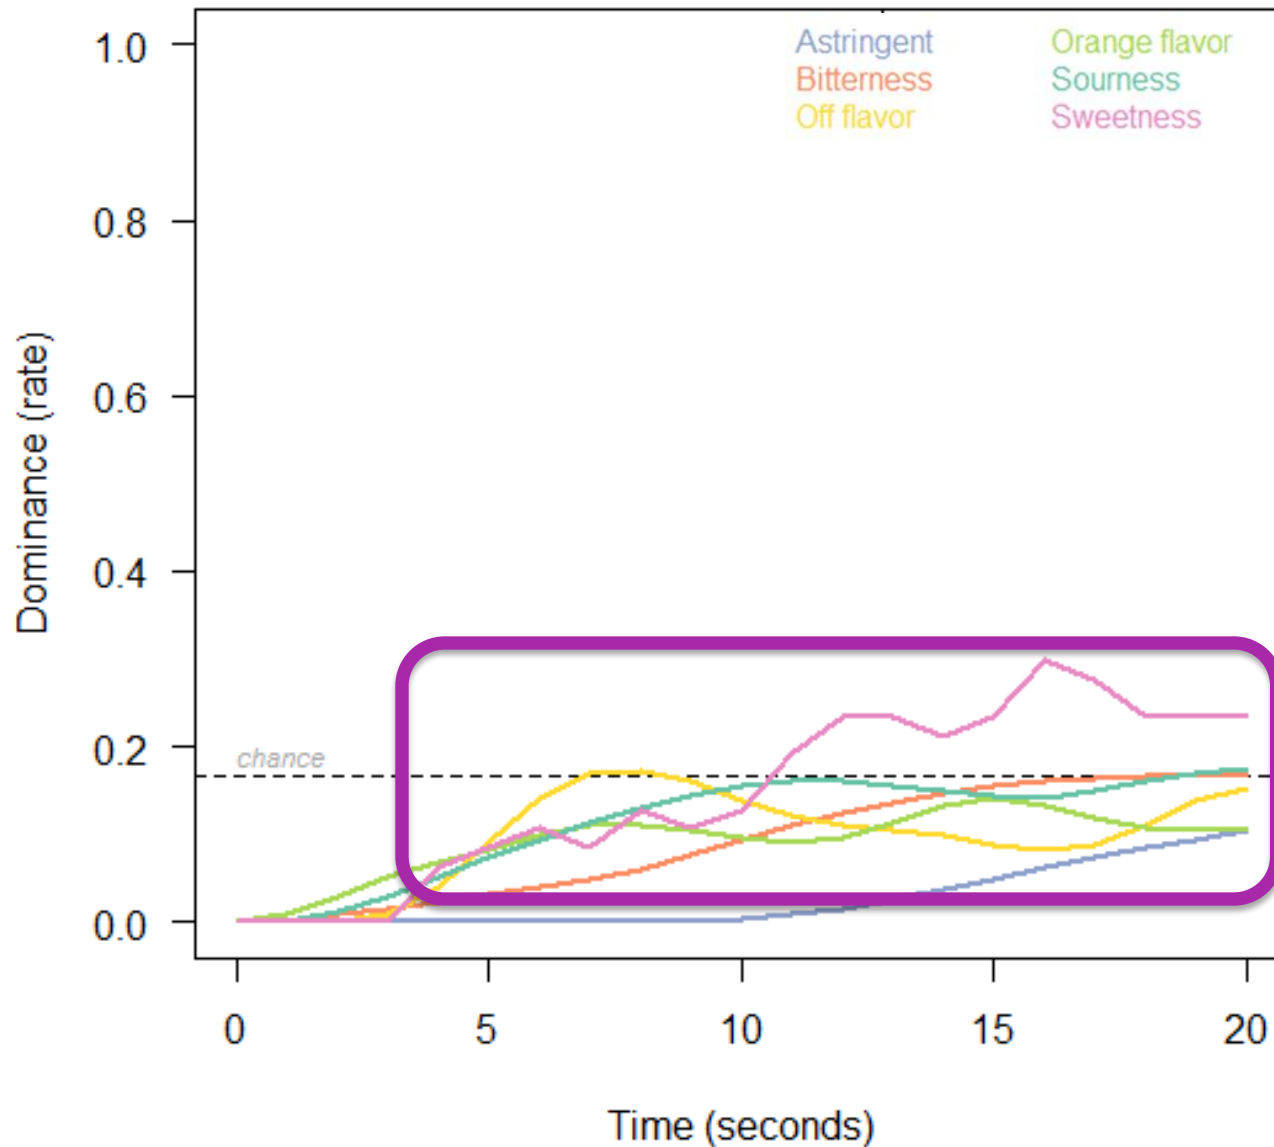

# TCATA Results for Orange Juice 2

**3. TDS is affected by a “damping effect”.**

**Temporal sensory information is lost.**

# TDS Results for Orange Juice 5

In TCATA, there is no “**damping effect**”.

How do flavours  
evolve in this product

## Flavor Profile method

(cf. Caul, 1957)

Order of elicitation of flavour characteristics is one aspect of the characterization of complex food... especially important is the early development of appropriate sensations.

## Taste Quality Tracking

(Zwillingner & Halpern, 1991)

TQT method is highly similar to, but with more control than, TDS. The authors find evidence of assessors experiencing sensations in parallel, suggesting a limitation with TQT.

## Temporal Dominance of Sensations (TDS)

(Pineau et al., 2009)

“...the new sensation popping up at a given time...”

# Some thoughts...

1. Evaluate methods critically.
2. Systematically investigate strengths / weaknesses / limitations, *on a per product category basis*.
3. Openness to new ideas and possibilities.

# *Thank you for your attention!*
